

dotforms test package: The proof of the pudding is in the eating!

dotforms test package is more than merely a trial offer, but useful and handy: It is a powerful, very flexible communication tool!

Originally, this offer was created for demonstration purposes. It is incorporating numerous technological characteristics that need to be discovered, lived and understood. An extract from the manual:

A test package consists of the digital pen and a number of dotforms paper. Each pen has a unique ID which is recognized by the system. In this way, data can differently be handled depending on the pen which records the data. A camera within the pen reads the writing; the data are saved and transmitted to a computer system when connected to a docking station.

You can log in at the web portal of Diagramm Halbach and provide your personal email address. Then all mails that you send with the test package contain your address as sender. Just define the four most frequent recipients for the email boxes. If you write with your test package, then these four address boxes are allocated to your chosen addressees; they receive a mail with the text body. For other emails you simply use the paper keyboard.

You are free to send the data via docking station and computer or via Bluetooth with your mobile phone.

Therefore: you define the scope of your test package. The configuration can be changed all the time, which enables you to define different standard recipients and the technology can thus be adjusted for individual demonstrations.

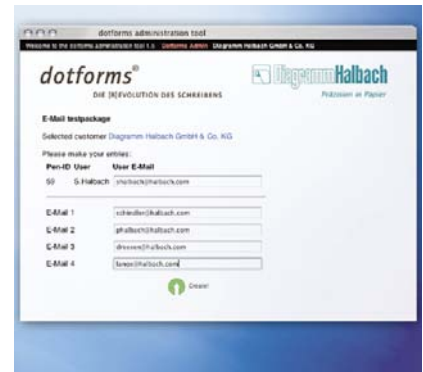

Diagramm Halbach is a full-feature service provider for digital pen applications on the basis of the Anoto functionality.

We supply the complete system with all components and can implement it for your environment.

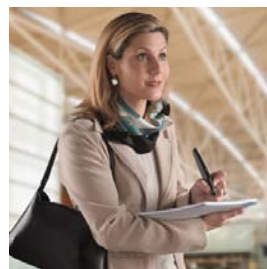

Diagramm Halbach, as one of the largest manufacturers of special paper and print products, possesses excellent capacities for the design, printing (offset as well as digital printing technology) and finishing of dotforms paper.

Diagramm Halbach is certified print partner of Anoto's for both offset printing (copied pattern) and digital printing (unique pattern).

dotforms applications support paper-based mobile data entry ...

- Local, internet and intranet solutions
- Barcodes
- Check box recognition (OMR)
- Handwriting recognition (HWR)
- Generation of digital graphics (JPG, PDF, TIF)
- Generation of XML, CSV and other data types
- Time stamp
- High capacity data verification
- USB and Bluetooth interfaces
- Unique and copied pattern
- Mobile phone application
